

**Creates instant smiles as seen on the TV show 'Extreme Makeover'**

## Amazing technology allows local dentists to create natural-looking, super-strong fillings, crowns or veneers in one visit!

It is called CEREC and it is now available in this area. Hailed by many health experts as the most important development in years, CEREC offers many exciting advantages.

**Before**

**After CEREC**

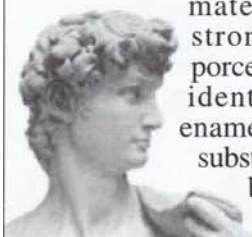

- **Matches your natural teeth exactly** in both color & texture.
- **Looks great and feels wonderful too.** It's totally compatible with tissue in the mouth.

### Why CEREC fillings are so strong...

Much as Michelangelo used his creative genius to sculpt his masterpiece David from solid marble in the 15th century, the dentists of today utilize the computerized genius of CEREC to sculpt a precise filling replacement from a solid block of industrial strength ceramic.

This material is much stronger than other porcelain and virtually identical to tooth enamel - the strongest substance in the human body—stronger yet than bone.

- **Proven in use for more than a decade.** More than 4 million CEREC restorations have been performed by dentists around the world.
- **Do you really need a crown? Maybe not – with CEREC.** Dentists can preserve precious tooth structure & rebuild broken or weakened teeth with minimal reduction.
- **Saves you time.** No need for a return visit.
- **No need for temporaries** that can fall out or make you gag.
- **Less sensitivity & less need for root canals.**
- **Longer lasting & stronger restorations.**
- **Most reliable.** Independent tests reported in a recent Journal of General Dentistry show CEREC to be the most long-lasting & reliable of all restoration methods.

### Ideal for failing silver-mercury fillings like these

Nowhere is CEREC more welcome than for the millions of adults who face the serious dangers of failing silver-mercury fillings—or will eventually. As you can see here, CEREC is a beautiful solution to the problem.
