

## What CEREC can do for you in a single visit...

**1** Replace failing & potentially dangerous silver-mercury fillings with strong, life-like inlays/onlays

**After CEREC**

The sooner you replace those unsightly silver-mercury fillings the better. Not only do CEREC restorations look so much better but it's also an extremely important health issue. Silver-mercury fillings often expand in time and fracture the tooth. Plus, decay can develop unnoticed under them because it's hard to see under that dark filling.

**2** Where a tooth is more heavily compromised the ideal answer is a tough but lovely CEREC crown

Which is the CEREC crown and which is the natural tooth? It's almost impossible to tell. As you probably know all too well, a traditional crown requires several visits while a CEREC crown restoration is complete in a single appointment. No impressions. No temporary crown. No need for a second injection. That has to be good news!

As seen on the TV show 'Extreme Makeover'

**3** A beautiful smile's best friend is CEREC veneers to solve a host of nasty problems in one sitting

**Badly discolored teeth**

**Before CEREC**

**After CEREC**

**Uneven / Chipped Tooth**

**Before CEREC**

**After CEREC**

**Gap In Front Teeth**

**Before CEREC**

**After CEREC**

**Why live with problems like these when they can be eliminated with CEREC in just one visit? As one CEREC patient put it so well, "Now I find myself smiling every chance I get!"**
